

Egy egyszerű rendező program

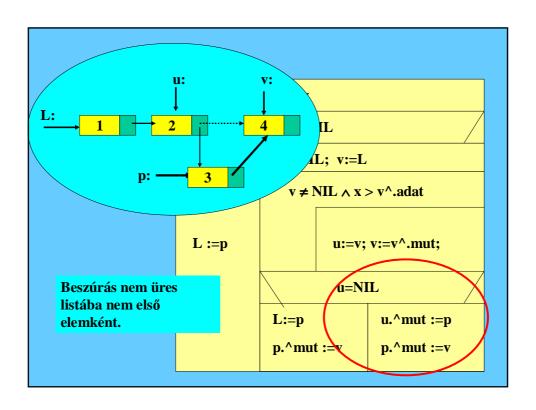

Modulszerkezet

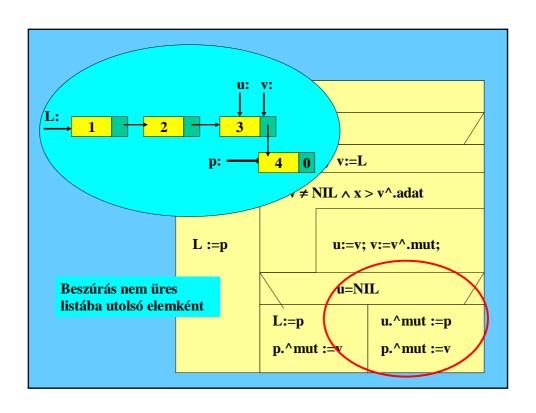

SimpleList.cpp

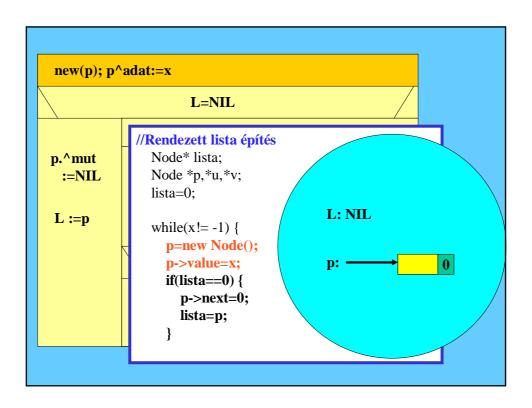

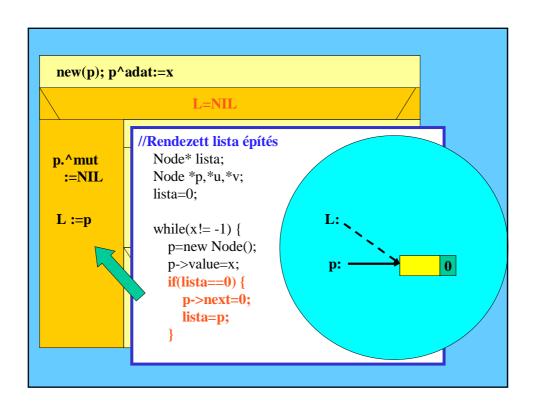

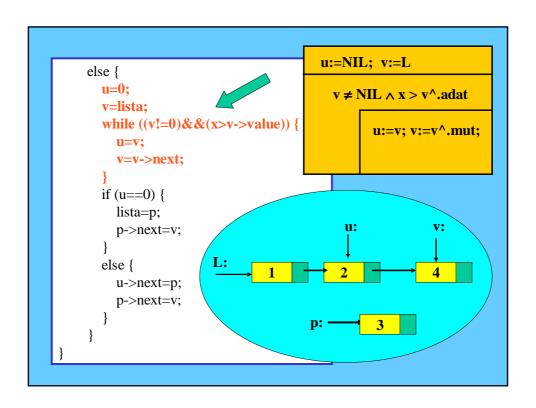

```
Kódolás
SimpleSort.cpp

int main()
{
//Listaelem
struct Node {
  int value;
  Node* next;
};
```

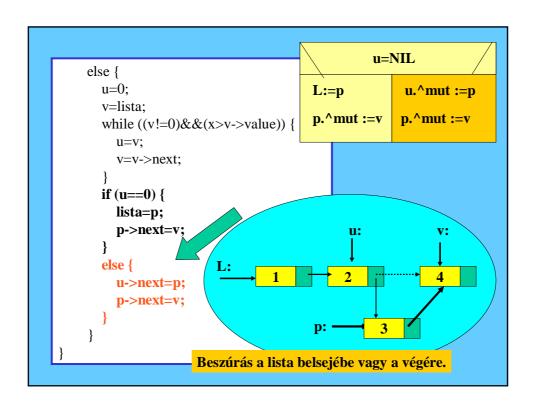

```
//Első adat bekérése
int x;
cout << "-1: vege. " << endl;
cout << "Adat: "; cin >> x; cout << endl;
```

```
u=NIL
else {
  u=0;
                                  L:=p
                                                 u.^mut :=p
  v=lista;
                                  p.^mut :=v
                                                p.^mut :=v
  while ((v!=0)\&\&(x>v->value))
    u=v;
    v=v->next;
  if (u==0) {
    lista=p;
    p->next=v;
  else {
    u->next=p;
    p->next=v;
                            p:.
  }
}
                                          Beszúrás a lista elejére
```

Lista típus (?)

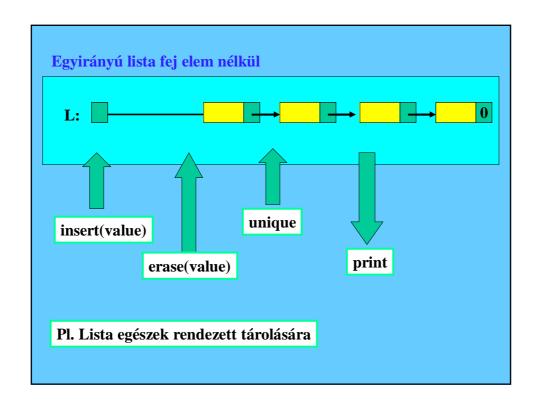

```
Egyirányú lista fejelem nélkül

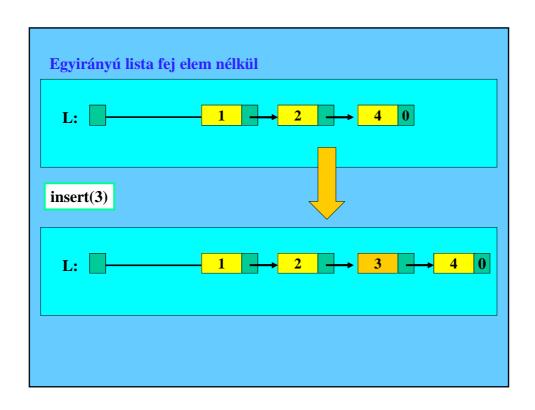

L:

class List {

public:

private:
 Node* L;
};
```

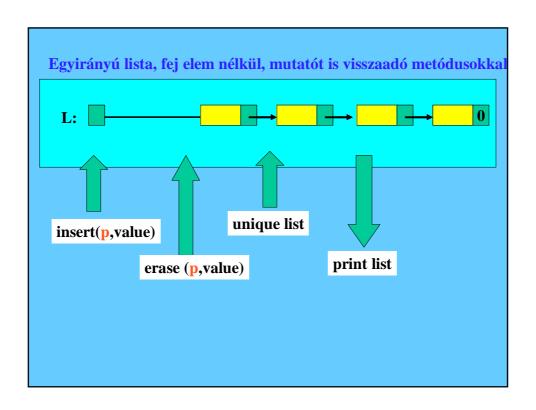

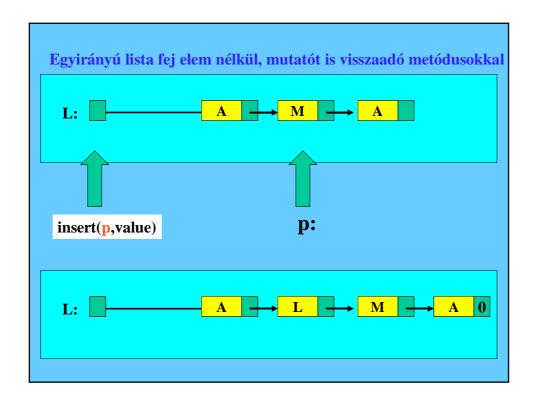

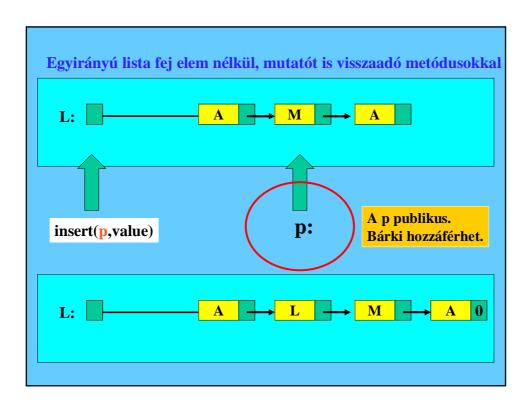

```
class Sorter {

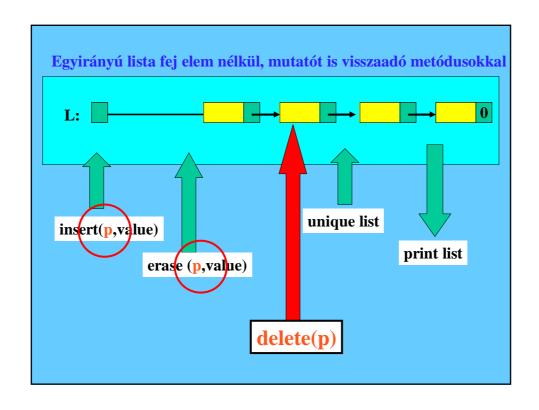

public:
    Sorter();
    ~Sorter();
    void insert(int value);
    void erase(int value);
    Sorter& unique();
    void print();

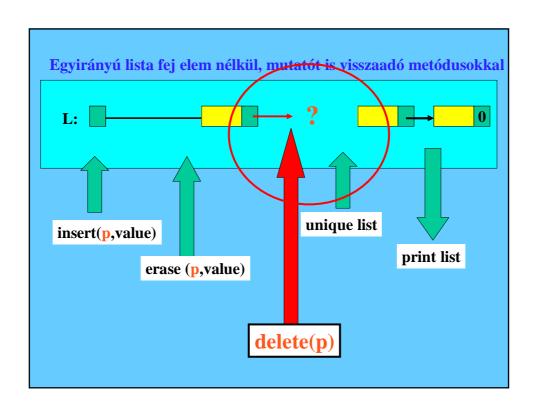

private:
    List *L;
};
```

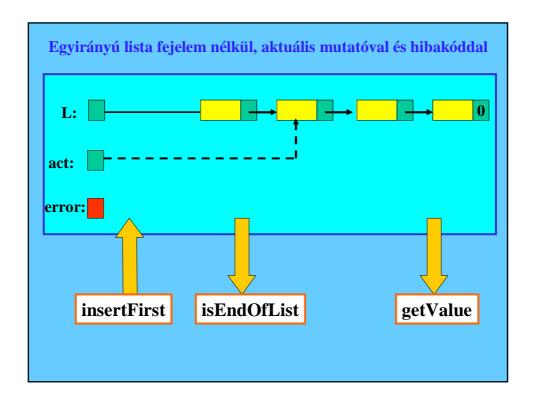

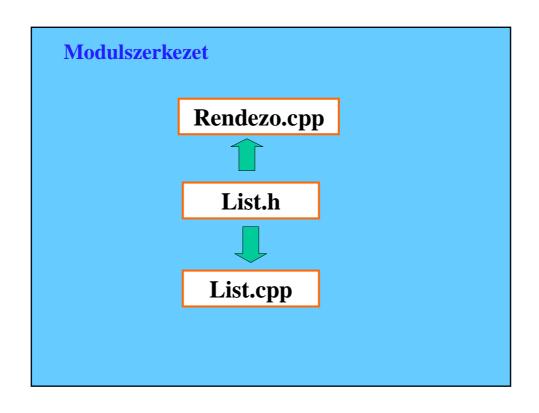

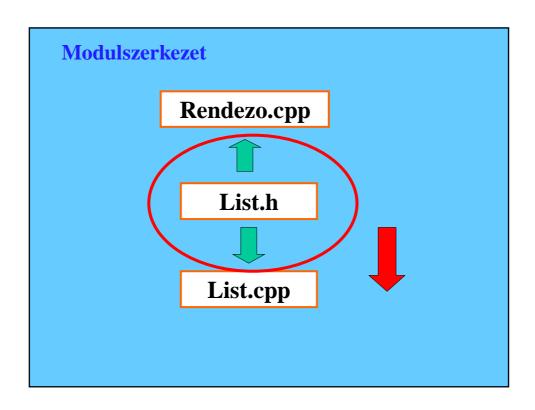

```
SimpleList.h

public:
    SimpleList();
    Node* add(int value);
    Node* next(Node* pointer);
    Node* first();
    Node* insertAfter(Node* pointer, int value);
    Node* insertBefore(Node* pointer, int value);
    Node* erase(Node* pointer);
    bool empty();

VESZÉLYES!!
```

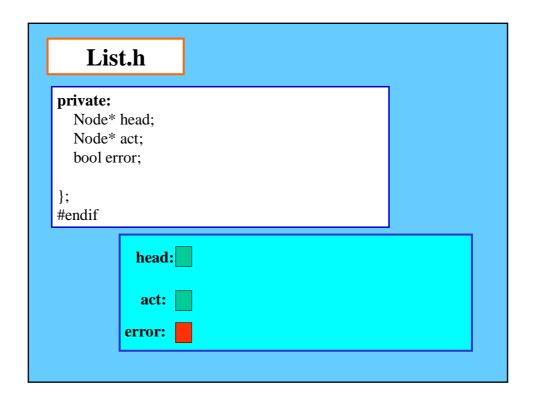

```
#ifndef LIST_H
#define LIST_H

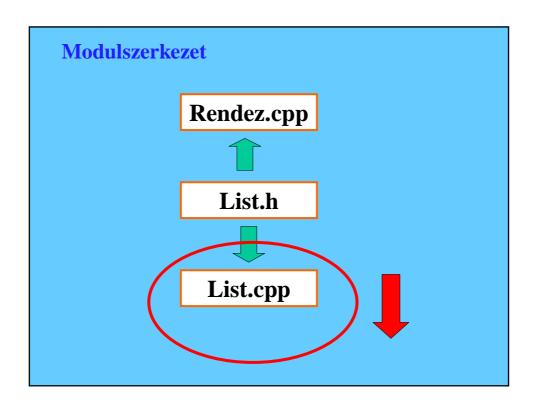

struct Node {
  int value;
  Node* next;
  Node(int i=0, Node *p=0) {
    value=i;
    next=p;
  }
};
```

```
class List {
public:
    List();
    bool isEmpty();
    bool fail();
    void first();
    ...
    void erase();
    void insertFirst(int value);
    void insertBefore(int value);
    void insertAfter(int value);
    void insertAfter(int value);
    //Kiegészítő funkciók
    void print();
```

```
List.h
          class List {
          public:
             List();
                                          Nincs mutató.
void
             bool fail();
                                          A művelet helyét
             void first();
                                          private adattag
             void next();
                                          tartalmazza.
